Exercises

Write a program that prints the numbers 1 to 4 on the same line with each pair of adjacent numbers separated by one space. Write the program using the following methods:

a) Using one output statement with one stream insertion operator.

b) Using one output statement with four stream insertion operators.

c) Using four output statements

Exercises

- Write a program that asks the user to enter two numbers, obtains the two numbers from the user and prints the sum, product, difference, quotient and remainder of the two numbers.

Exercises

- Write a program that reads in the radius of a circle and prints the circle's diameter, circumference and area. Use the constant value 3.14159 for pI. Perform each of these calculations inside the printf statement(s) and use the conversion specifier %f.
- Hint:
- diameter = radius * 2
- circumference = PI * diameter
- area = PI * radius * radius;
