Lab # 6

Q1: Write a program that asks the user to enter a list of integers. The program is to determine the largest value entered and the number of times it was entered. For example, if the following series is entered

5 2 15 3 7 15 8 9 5 2 15 3 7

It would output the largest value is 15 and it was entered 3 times.

Q2: Write a **function** that takes no parameter and does not return a value to generate the following output. Use a while(1) loop to keep running until 0 is entered or if the input is non-numeric.

```
Enter Numbers to add to the sum.
Enter 0 to quit.
Current Sum: 0
Number? 200
Current Sum: 200
Number? -15.25
Current Sum: 184.75
Number? -151.85
Current Sum: 32.9
Number? 10.00
Current Sum: 42.9
Number? 0
Total Sum = 42.9
```
